Ismail Fatih Raihan

ismailfatihraihan@gmail.com | linkedin.com/in/ismailfr | github.com/ismailfatihraihan | Bandung, Indonesia

Summary

Computer Science student (GPA 3.83) with production experience in full-stack development and data engineering internship experience: PySpark/Python data pipelines and React/TypeScript/PostgreSQL web apps. Enrolled in the University of Tokyo's GCI World data science program; JLPT N3.

Education

Universitas Pendidikan Indonesia — Bandung, Indonesia
Bachelor of Computer Science — *2023 – Present (Expected Sep 2027)*

- GPA: 3.83 / 4.00
- Relevant Coursework: Machine Learning, Deep Learning, Natural Language Processing, Artificial Intelligence, Big Data, Data Analysis, Web Programming, Operating Systems

GCI World – Data Science Program, The University of Tokyo — Online
International online data science course — *In progress*

Experience

Software Developer Intern — Feb 2026 – Jul 2026
DSTI – Universitas Pendidikan Indonesia — *Bandung, Indonesia*

- Built a Bronze-to-Gold Medallion Architecture ETL pipeline with PySpark and Microsoft Fabric OneLake to process a 47,000-row dataset, writing automated transformation scripts with data quality checks across all three layers.
- Independently developed a Python and Streamlit visualization pipeline on the same dataset, with multi-dimensional filter logic, and delivered the interactive dashboard to the internship supervisor.
- Compared two data stack configurations (Microsoft Fabric vs. Apache Doris + Superset) for the same use case and reported the tooling trade-offs.

Freelance Fullstack Developer — Feb 2025 – Mar 2026
Donation Management System for a Mosque Committee (Production App) — *Bandung, Indonesia*

- Solely designed, built, deployed, and maintained a financial management web app used during the annual Ramadan donation season, using React, TypeScript, and Supabase (PostgreSQL) with Row Level Security for role-based access control.
- Extended the system across two annual cycles based on user feedback: Hijri-year period management, a public guest mode for transparency, advanced search and filters, and a full codebase refactor.
- The system has recorded 604 transactions totaling IDR 251 million for 1,664 recipients with 100% uptime during the donation periods.

Projects

ETL Stock Market Data Pipeline & Dashboard | *Python, SQL · team project* — GitHub

- Built an automated ETL pipeline in Python to collect and process stock market data into SQL storage.
- Wrote SQL queries for analytical retrieval and visualized trends in an interactive dashboard.

Coffee Supply Chain Traceability System | *Go, Hyperledger Fabric, Docker · course project* — 2024

- Developed a blockchain backend in Go on Hyperledger Fabric with immutable records for end-to-end traceability across supply chain nodes; containerized with Docker.

Tirta Bandung Water Monitoring Dashboard (simulation) | *Node.js, ExpressJS, MongoDB* — 2024

- Built a web dashboard and REST API that simulates water-quality reporting from multiple water points, storing readings as MongoDB documents.

Skills

Languages: Python, TypeScript, JavaScript, Go, SQL, C/C++
Data: PySpark, Streamlit, Microsoft Fabric (OneLake), Apache Doris, Apache Superset
Backend & Database: Node.js, ExpressJS, Supabase, PostgreSQL, MySQL, MongoDB
Frontend: React.js, Tailwind CSS, HTML5/CSS3
Tools: Docker, Git/GitHub, Linux/WSL
Spoken languages: Indonesian (native), English (proficient), Japanese (JLPT N3, studying for N2)

Certifications & Competitions

JLPT N3 | Score 126/180 — 2026
Alibaba Cloud Certified Developer | Credential ID: ACCD0119700100002384 — 2025
AWS Cloud & Generative AI Fundamentals | Dicoding — 2025
Bolt International Hackathon | Solo participant, 1-month build — 2025
Satria Data – Big Data Challenge | Participant, social media video classification — 2024
Gemastik – Competitive Programming | Participant — 2024
